

Latah Recovery Center Effectiveness: December Report

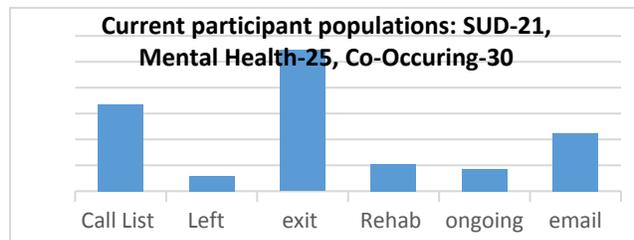

Since The Center opened in October of 2015, 253 peers have obtained recovery peer services. The following shows where those peers currently receive services. Surveys are taken by peers that come in for services. Some of them are on-going. Some peers have taken the survey while they were on-going and later moved to call list.

Call List: As of this date we have 67 peers that just want to be called once a week or they have missed 3 appointments with their recovery peer volunteer. They are called every week to see how they are doing.

Left Program: No longer participating in our services.

Exit: We have 109 Peers that have worked in the recovery peer program and have learned coping skills and have met their goals. The peer and their Recovery Peer agree they are ready to transition back into the community.

Rehab: we have 32 peers that we are waiting for them to come back from rehab/jail. They are peers that started here at the Center and felt they needed an inpatient rehab center. We get them the references they needed and helped to make that transition as easy as possible

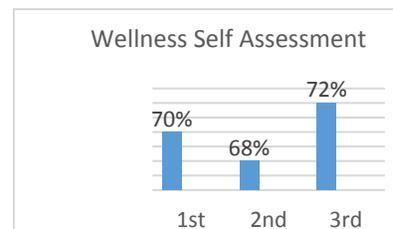

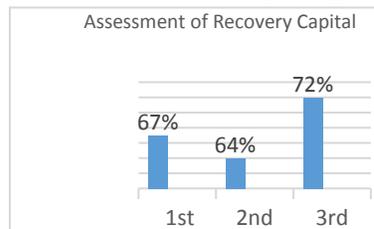

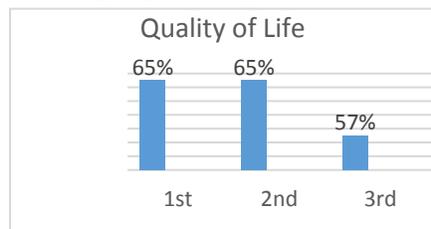

On-going: as of December we have 17 peers currently involved in the recovery peer program. These 17 come in and talk to a recovery peer

volunteer.

Email: This category covers the web-cam and email people that can't come in due to distance. This can also include peers that we can't reach by phone. 45 receive this service.

We started surveys in January 2016. We administer them every 3 months and when they exit the program. Results are intriguing, showing the travails, and ups and downs of a life beginning recovery.

Quality of Life Survey measures where the peer's quality of life is with their substance abuse or a mental diagnosis or both. The survey size for this is 1st (70) 2nd (31) 3rd (9)

Assessment of Recovery Capital: the volume of internal and external assets that you already have or can be brought in, to initiate and maintain recovery from substance abuse or mental health. The survey size for this one is 1st (58) 2nd (23) 3rd (16)

Wellness Self-Assessment: shows us how the peer's life is changing as far as physical wellness. The survey size for this is 1st (76) 2nd (23) 3rd (12)
